ALL THAT IS BEST IN..

eurysanthemums for 1958

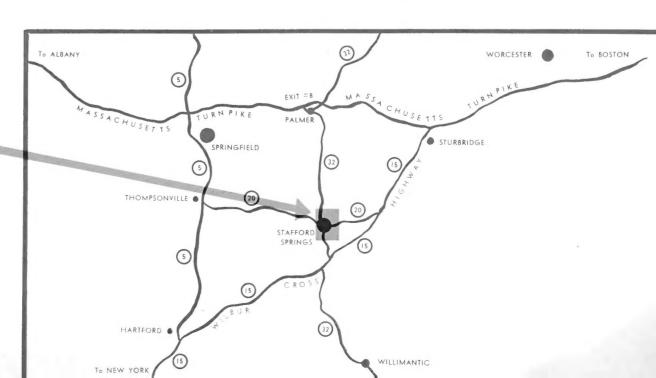

STAFFORD CONSERVATORIES

STAFFORD SPRINGS, CONN.

Overland 4-2751

Visitors are always welcomed at the Stafford Conservatories

It is with great pleasure that we present to you our 52nd Annual Listing of "All that is Best in 'Mums". We hope you will find it a valuable aid in planning your planting of 'Mums for 1958.

TERMS OF SALE

Cancellations or changes on early booked orders must be received at least 30 days before shipping. Prices quoted throughout this catalogue are for the trade only.

Parties outside the trade add 25% to the prices quoted in this catalogue.

TERMS OF PAYMENT

CASH UNLESS CREDIT IS ESTABLISHED WITH US.

5% discount for CASH with the order, or on credit accounts 10 days after date of invoice. Net 30 days. Paid in advance orders when requested by Parcel Post must include sufficient postage.

C. O. D. ORDERS must be accompanied by one-fourth the amount of the order to insure acceptance.

DISCLAIMER

It is our policy and constant effort to secure and provide the cleanest stock available. We exercise every care to deliver to our customers the best stock possible.

We give no warranty, expressed or implied, as to the productiveness of any stock, as we exercise no control over the conditions under which the stock is planted and grown by the purchaser. Therefore, we cannot be held responsible for the results produced. Our liability in any instance is limited to the purchase price of the stock in question.

We hold ourselves responsible for miscounts or misdirected shipments and will gladly make adjustments or replacements should they occur. These must be reported promptly. Please retain packing sheets in such cases.

METHOD OF SHIPMENT

All orders shipped by EXPRESS unless requested otherwise. Prices quoted are F.O.B. Stafford Springs. Paid in advance orders when requested by Parcel Post must include sufficient postage.

DAMAGE OR DELAY IN DELIVERY

We cannot be responsible for delays, damage or loss in transit. Claims for such losses should be made against the Common Carrier, at the time of delivery, by the consignee.

CALL ORDERS

Many Customers prefer to call for their cuttings rather than have them shipped. Orders may be called for on MON-DAY, TUESDAY or WEDNESDAY, only if placed in advance. This policy is necessary due to the fact that shipments by express etc., must be made early in the week. THOSE WISHING TO SELECT ORDERS ON ARRIVAL MUST CALL ON THURSDAY, FRIDAY or SATURDAY.

IMPORTANT

Place your Order Early for all programs. It avoids substitution and helps us to serve you better.

10% discount on 10,000 or over of OUR SELECTION

GIVE INFORMATION BELOW WHEN ORDERING.

Avoid transit delays or losses by using our "Call Order" service.

VARIETIES OF RECENT INTRODUCTIONS

GARDEN VARIETIES

BENORA Sept. 30

Large flowering white pom with exceptional foliage and structure. A prolific bloomer with spreading growth habit.

KINGS RANSOM Oct. 1

Large golden yellow decorative. Here is an outstanding garden addition of medium height that is also suited for Spring Pots.

TORONTO Sept. 20

Prolific blooming orange bronze decorative that will prove to be exceptionally beautiful in the garden. Displays excellent growth habit for borders or Spring Pots.

DOLLI-ETTE Oct. 10

Distinctive golden bronze and red spoon. A fine novelty that will gain rave admiration in pots or in the garden.

STANDARDS

IMP. INDIANAPOLIS WHITE 10 wk. - Nov. 5

This variety is a selection of Indianapolis White that provides a reduction of winter quilling and pinking. As such it is only recommended for flowering from December thru April, where the grower might have been encountering a serious quilling problem. The variety offers depth, better form and color clarity. Should not be raised under high temperature conditions.

FRED SHOESMITH 10 wk. - Nov. 10

Here is a large, white incurved standard that is consistently larger than the Indianapolis varieties and usually flowers about seven days later than they do in any Off-Season program. Can be raised throughout the year although not quite as outstanding during January and February. Definitely susceptible to Botrytis but can be controlled through proper preventitive practices.

YELLOW SHOESMITH 10 wk. - Nov. 10

Pleasing yellow sport of Fred Shoesmith. More compact than parent resulting in slightly smaller size, but compactness increases its desirability from a handling standpoint.

FRED YULE 9 wk. — Nov. 3

A brilliant orange bronze intermediate incurved standard, that can be flowered from May thru November. Introduces a color unmatched by any other variety.

VALENTINE 11 wk. — Nov. 20

Large red disbud decorative that can be raised from October thru April with one additional week from pinch to shade. Provides a better color than Deleware for winter pot plants.

ROSE HARRISON 12 wk. - Dec. 5

Large reflexed flower with a true shell pink color. This entirely different mum will prove to be most striking from the retailer aspect.

POMPONS

FEATHERTOP 10 wk. - Nov. 5

Here is one of the most distinctive poms available today. The clear white petallage is feathered and partially tubular, surrounding a green center that closes with development. The variety is characterized by strong and vigorous growth and can be used in all ten week programming.

GRECOS CARNATION 11 wk. - Nov. 20

A clear white intermediate pom with finely serrated petals creating a form somewhat similar to that of a carnation. This pom is not a novelty but rather a much needed clear white for its natural season. In as much as the variety performs best with high light intensity it should not be used in light programs.

ICECAP 13 wk. — Dec. 10

Intermediate white pom that will initiate bud and develop at 56 degrees, making it very desirable for northern winter programs. A very vigorous and productive addition that does not pink.

ELEGANCE 14 wk. — Dec. 20

A very nice white decorative of good size that should find a ready market during its natural Christmas season. Growth is strong and without a trace of vegetativeness.

YELLOW CALUMET 8 wk. — Oct. 15

Bright lemon yellow sport of Calumet. An excellent early cut flower variety.

YELLOW ICEBERG 10 wk. - Nov. 5

A beautiful yellow sport from the top white pom. Especially valuable in the early shade programs. Retains same vigor and other outstanding qualities of the parent Iceberg.

YELLOW TAFFETA 11 wk. - Nov. 15

Intermediate lemon yellow sport from the very popular Taffeta. A welcome complement to the outstanding Off-Season varieties.

GOLDEN ELEGANCE 14 wk. — Dec. 20

Intermediate lemon yellow sport from Elegance. Production is high coupled with a good spray formation and clean growth habit.

BRONZE TAFFETA 11 wk. — Nov. 15

A lively deep bronze decorative. Variety retains its color exceptionally well.

Oct. 15	July 10	Aug. 1-5

CUSHION VARIETIES

The Cushion or Mound varieties bloom in September the first year and in August the second year if not disturbed.

Garden varieties planted before June should be kept pinched back until the last pinch date shown for the variety.

GARDEN VARIETY COLLECTIONS

If you are familiar with the better garden 'Mums we suggest you make the selection of varieties to suit your particular requirements. Such reservation will give your order preference in shipping.

For those who are not acquainted with the varieties we will select varieties for the collections listed below that you may desire. These varieties however will be selected from surplus stock at the time of delivery,

300 — 950 \$6.00 per 100 1000 — Up \$55.00 per 1000

MINIMUM ORDER AT THIS PRICE 300 R. C.

Orders calling for 1000 or more and restricted to 50 of a Variety billed at \$6.00 per 100.

COLLECTION #1 — All cut flower varieties.

COLLECTION #2 — All dwarf or border varieties.

COLLECTION #3 — Cut-flower and border varieties. COLLECTION #4 — Varieties for Spring Pots.

GARDEN VARIETIES FOR SPRING BLOOMING POT PLANTS

These plants have sales appeal as they can be sheared back after blooming and will flower again in the early fall.

Plants should be ordered to arrive 1 to 2 weeks ahead of first pinch date. For delayed start they may be planted and pinched on pinch date.

Pot and place under artificial lights upon arrival. Use 60 Watt bulbs spaced 4 ft. apart and 30 inches above the plants.

Maintain a 60 degree night temperature until buds are well developed.

3" Hardies — For this very popular seller use one cutting per pot. If you haven't tried this seller we readily suggest you do so. Many growers report heavy demand for spring and summer sales.

TWO PINCH METHOD

USE 4 PLANTS PER 6 INCH POT

FOR EASTER - April 6th

GROWING 'MUMS FROM START TO FINISH

First step if you are not experienced in growing 'MUMS is to acquaint yourself with their habits and needs, then be prepared to take care of them as they progress in growth. We give below basic details which we find are most widely used among reputable growers in this section of the country. The grower will soon learn by his own experience how to modify or elaborate on these instructions.

The successful grower will figure out his planting schedule, many months or a year in advance. This not only helps you but the supplier of young stock to have sufficient stock for the particular planting date. Have the space ready for them and plant the cuttings on arrival or as soon as possible. The cuttings you receive will be grown under modern conditions, from the cleanest stock available, and as free from disease and premature buds as modern methods can produce. Failure to carry out and properly execute each step at the correct time will show its effect in the growth and quality of your finished product.

SOIL — Preparation and Fertilizing

'Mums grow well in most soils. Moderately porous soil is best. This can be made by the addition of peat or manure but knowing the behavior and nutrient content of your own particular soil is important. Soil tests will give you this information and if you cannot do this yourself, your Agricultural College or Experiment Station will be glad to do it for you.

Before sterilizing or planting, add lime and superphosphate as needed. (In case of steam sterilizing these materials should be added before sterilizing.) Use about 3-5 lbs. to 100 sq. ft. of bench space. Nitrogen and Potash can be added after the plants have become established and start to grow. These elements can be applied in dry or liquid form according to the growers preference. A complete dry fertilizer such as 5-8-7 or 5-10-5 or any of the water soluable fertilizers can be used.

SOIL STERILIZATION

Sterilizing the planting soil is vitally important in destroying such diseases as Verticillium wilt, nematodes, and other destructive organisms carried in the soil, to insure a quality crop and is a must if successive crops of 'Mums are grown in the same soil. The cuttings supplied, while free of diseases when received will pick up various diseases from the soil they are planted in, unless it has been properly and thoroughly sterilized. Before sterilizing be sure to loosen all soil thoroughly as steam or chemicals cannot penetrate hard packed soil satisfactorily.

In addition to producing a better crop sterilizing also proves to be economical in allowing reuse of valuable soils and humus, and saving on costly labor involved in changing soils and weeding.

Sterilizing can be done with either Steam or Chemicals. With steam sterilizing, which is most practical, it is necessary first that the soil be moist before sterilizing and that a temperature of 180 degrees farenheit be maintained throughout the entire soil mass for a period of not less than one half hour.

Chemical sterilizing can be used where steam is not available and circumstances will permit it. The soil should be at least 60 degrees farenheit and the greenhouse being treated should have no other living plants in it, as chemical reactions will destroy them. There are a number of chem-

icals suitable for this work, but whatever is used, follow the manufacturer's instructions carefully.

HIGH SALTS DAMAGE

When using old soils, or soil used for a previous crop, it should first be sterilized. Then watch for high soluable salts which may be present 2 weeks after sterilization. These salts cause plenty of trouble to 'Mums. They are the residue of fertilizers used on the previous crop, and will kill the roots of young cuttings or seedlings, or result in a poor sickly crop. These salts can be washed out of the soil by HEAVY LEACHING with water, giving two or three applications in succession. High salts do not necessarily mean high nutrient levels. You can have high salt and low nutrient levels. After you get rid of the high salts you should continue with a regular feeding program, as you wash out all your fertilizer as well as the salts. The use of liquid or water soluable fertilizers also helps to reduce salt hazard.

PLANTING AND SPACING

The time of planting will be determined by the blooming date, or response group, quality and size of flowers, and pinching if desired. For normal flowering allow about three weeks from planting to pinching. Normal pinch date is given with each variety listed in the general catalogue of varieties. For the off season program refer to schedule outlined in this catalogue for planting and pinching data.

Plant cuttings shallow, not over one inch deep and directly to permanent benches if possible, soon as the cuttings are received. Keep roots of the cuttings protected at all times while planting. Exposure, especially to hot sun and wind, will destroy the root action in a few seconds.

If space is not ready when cuttings arrive they should be potted or banded to keep them soft and growing. Here again, careful attention should be given to see they are put in fresh or sterilized soil, so as to keep them free of verticillium wilt and other soilborne diseases. Be sure not to let them stay too long in this crowded condition. Shading newly planted stock on very hot sunny days for the first couple of days will help considerably, as well as, frequent spraying with water over the tops of the cuttings. They should not be allowed to wilt.

Spacing will depend on the quality desired as well as the time of year and number of pinches. Standards are generally spaced 7×8 or 8×8 , grown two stems to the plant. Some growers allow three flowers to come on the outside rows where light is more abundant. For single stem culture 6×5 or 6×6 is ample. Pompon spacing depends on method of pinching and varieties. Some varieties have much heavier foliage than others and require more space. For the one pinch method 6×8 or 7×8 is fairly standard. For 2 pinch method 8×9 or 9×9 will be sufficient. For single stem production 4×6 or 4×7 is about right. The general rule followed is to give each flowering shoot approximately 20 sq. in. of space.

WATERING

Chrysanthemums require lots of water, especially when grown on raised benches and if you have a good porous, well drained soil. Water heavily after planting and then spray or sprinkle plants for a few days until they have taken hold. Do not let them wilt if possible. Once the foliage

gets heavy do not water overhead and by no means allow the foliage to be wet overnight. Keep the foliage dry and the soil moist.

PINCHING

Pinching means the stopping of the upright growth of the plants by cutting or breaking off the growing tip of the plant stem. It is done to increase the number of stems per plant, to control type of bud formation and to keep plants shorter in growth. This will cause a number of breaks or shoots to appear. The plants should be pinched soon after the cutting takes hold and starts to grow freely. Usually only the tip of the stem is removed when under fast modern production. Do not pinch down into the hard stem. Thinning the breaks down to about 3 shoots to the plant on pompon varieties and 2 shoots on the Standards usually give best results. Normal pinch dates are given in the general listing of varieties. For the off season cut flower or pot plant program refer to pinch dates in the desired schedule.

LIGHT AND TEMPERATURE

Except for the first few days when the young cuttings are planted or potted, Chrysanthemums require all the light they can get. If shade is on the roof from summer it is best to remove it at least by the 1st of September. Chrysanthemums are no longer considered a cool crop. A minimum of 50 degrees or better still 55 to 60 degrees night temperature is considered best for all stages of growth for normal flowering. This is particularly important during bud initiation as too low a temperature will prevent buds from forming properly and likely result in some blind growth. Temperatures too high, 90 degrees or over, which can occur under black cloth, is also bad as it tends not only to slow down the crop but fades the pink, red and bronze shades.

INSECTS — PREVENTION AND CONTROL

It is very important to keep the stock clean and free of injurious insects. The best way to insure this is to start spraying the plants about two weeks after planting and to spray at intervals of every two or three weeks until color shows. You will find it easier to keep them clean than to wait until infestation shows up and causes damage, then have the task of trying to get the best of it.

A good general purpose spray for Chrysanthemums:

Material	Amount to make		
Water	100 Gal.	25 Gal.	3 Gal.
DDT 50% wettable powder	1 lb.	$\frac{1}{4}$ lb.	$1\frac{1}{2}$ tbsp.
Malathion 25% wettable powder	$2\frac{1}{2}$ lbs.	10 oz.	4 tbsp.
Parzate, or Fermate	$1\frac{1}{2}$ lbs.	5 oz.	2 tbsp.
DuPont Spreader sticker - or other spreading agent such as Dreft, may also be used	6 oz.	2 tbsp.	1 tsp.

Mixing Procedure — Put all dry ingredients into a can or pail. Add small amount of water, stir to make a thin paste. Put a small portion of the water to be used into the spray tank. Add above mixture slowly, stirring constantly, (run agitator while adding the mixed solution). Add balance of water and be sure it is well mixed before using.

DISBUDDING

It is extremely important that you take the time to select the flowering buds on Standards as soon as they appear and are sizeable enough to remove. If the crop was planted and pinched on or near the recommended dates, flower the first bud that appears. In other words, as soon as a bud of any kind appears, remove all side shoots and let the center bud flower.

SUPPORTING THE PLANTS

To grow good flowers with good stems it is essential to keep the plants properly supported at all times.

The wires and cross string method is least work, most economical and practical. Start supporting the plants soon as they are established and either add additional layers of wires and cross strings or move the first layer up about every 10 to 15 days depending on growth.

TO PREVENT PREMATURE BUDS

ALL Mum cuttings need additional light, according to their response group, during certain times of the year so as to prevent premature buds, when grown in temperatures over 50 degrees. See "Additional Lighting Schedule" and "Year 'Round Lighting and Shading Schedule" on page 19.

DISTANCE TO PLANT

To produce quality blooms for either a pinched or no pinch crop, spacing as shown in schedule below is recommended.

SPACING FOR NO PINCH CROP

Crop Flowering	Pompon	Standards & Disbuds
May — Sept.	4 x 5	6 x 4
Sept. — Nov.	4 x 6	6 x 5
Nov. — Mar.	4 x 7	6 x 6
Mar. — May	4 x 6	6 x 5

SPACING FOR SINGLE PINCH CROP

Crop Flowering	Pompon	Standards & Disbuds
May — Sept.	8 x 6	8 x 7
Sept. — Nov.	8 x 7	8 x 8
Nov. — Mar.	8 x 8	8 x 9
Mar. — May	8 x 7	8 x 8

THE CONTROL OF PESTS AND DISEASES EFFECTING CHSYSANTHEMUMS

Our own controls for most common Chrysanthemum Pests and Foliar Diseases are: D.D.T. as a spray or dust, Systox in soil as a systemic, Malathion as a spray, Parzate as a fungicide, alternating Aramite and Lindane as Aerosol bombs. There are many other controls that are equally effective which can be used.

PESTS	CONTROLS
Red Spider	Malathion or Parathion as a spray. Systox as a systemic in soil. Aramite or Lindane Aerosol bombs.
Thrips	Lindane, Malathion bomb or spray. D.D.T. dust or spray.
Aphids	Malathion or Parathion bomb or spray. Parathion pressure fumigators also useful for small areas, especially when aphids attack open flowers.
Leaf Roller Midge Tarnish Plant Bug or Cinch Bug	Parathion bomb, spray or dust. D.D.T. spray or dust.
Mite-glazed brown appearance on underside of foliage.	Endrin spray very effective.
Botrytis or Petal Rot, in flowers caused by High Humidity.	Dust or spray weekly with Parzate when color shows. Keep air circulating, ventilate and heat. Keep humidity down.
Foliar Nematode, Tiny Eelworms inside leaves causing brown blotches.	Parathion spray. Systox in soil 3 to 4 weeks after planting. P-40 on soil also effective.
Septoria Leaf Blight. Grayish brown spots on foliage.	Regular spraying with either Parzate or Fermate.
Verticillium Wilt	Outer edges of leaves turn yellow. General wilting of leaves usually starting at bottom and working up. Sterilize Soil and use Verticillium free cuttings.
Mildew-white powdery growth on upper side of leaves.	Spray wettable Sulphur with spreader.
Black Spot	Regular spraying with Parzate or Fermate. Do not allow foliage to be wet over night.

YEAR AROUND FLOWERING OF CHRYSANTHEMUMS

YEAR AROUND FLOWERING

By using artificial light or shading with black cloth, Chrysanthemums can be flowered at any time of the

If you wish to flower 'MUMS at any time other than their normal flowering season, select your flowering date or dates and order your stock early to be sure you have them to plant at the proper time. Then be prepared to light or shade them as your program requires.

SHORT DISBUDS or FAST DISBUDS

Short Disbuds or Fast Disbuds are becoming increas-

ingly popular throughout the trade.

Under this programming you can achieve 24 to 30 inch stems in twelve to seventeen weeks, depending upon the time of year, producing 9 to 12 blooms per square foot.

This is a pinched crop with your preference as to two or three stems per plant.

The program requires the same cultural factors as the

Year 'Round program.

If you wish to plan such a program kindly notify us and we will gladly furnish a schedule for this program together with a listing of the recommended varieties.

LIGHTING

Lights are needed to prevent formation of buds before required growth is attained. A light intensity of not less than 10 foot candles is necessary to accomplish this, or approximately 1½ watts of light per square foot of space, including walks. For small installations 60 watt lights, under reflectors, spaced 4 feet apart; or 100 watt lights, under reflectors, spaced 6 feet apart and about 30 inches above the tops of the plants will usually prove satisfactory. AT NO TIME SHOULD THERE BE MORE THAN 8½ HOURS OF DARKNESS. Consequently lights should be applied preferably after 10 P.M., or as near midnight as possible, and lighted for the required number of hours as shown in the schedule.

Lighting Plants on a small scale.

When a small block or any part of a house is to be grown under lights be sure to drop a black cloth to cut off any other plants around them so their growth will not be affected by the lights. In other words the plants to be grown under lights must be isolated from any other plants around them during the hours of lighting.

ADDITIONAL LIGHTING SCHEDULE

- 2 Hours during the months of August, April, May.
- 3 Hours during the months of September, October, March.
 - 4 Hours during the months of November and February
 - 5 Hours during the months of December and January

Temperature — To flower under lights during the winter months it is necessary to keep a minimum temperature of 60 to 65 degrees, and not less than 60 degrees at night, during the period of growth and bud formation. After color shows in the buds, lower temperature gradually to 54-56 degrees to harden off the finished flowers.

SHADING

On programs calling for shading with Black Cloth, the plants should be covered daily at 5 P.M., and the cloth removed at 8 A.M. Continue the shading until buds are well developed and showing color. It is essential in shading that the benches be completely covered as any leaks of light will result in delayed flowering where light leaks retard progress of the buds.

YEAR-ROUND LIGHTING AND SHADING SCHEDULE

Response Group	Shading to Stop in Fall	Shading to Start in Spring
7 week	Aug. 25	Apr. 7
8 week	Sept. 1	Mar. 31
9 week	Sept. 8	Mar. 24

12 week	Aug. 18	Apr. 21
13 week	Aug. 25	Apr. 14
14 week	Sept. 1	Apr. 7

12-9-12 INTERRUPTED LIGHTING FOR WINTER STANDARDS

The use of interrupted lighting on the Indianapolis, Mefo and Queen varieties has resulted in a fuller flower with better form during the dark winter months. The use of the 12-9-12 schedule outlined below, and the practice of maintaining both day and night temperatures near 60 degrees invariably produces the best crop results.

To use this method you first determine the normal "lights off" date for the blooming date desired. Count back 12 days from this "lights off" date and shut off lights for 9 complete short days. Then give long days once again for 12 full days. Please note however that if you have varieties other than those mentioned above, in the unit, be sure to protect them from this lighting procedure by the use of black cloth.

Year Around Pot Plant Schedule

ONE PINCH METHOD

'Mum Pot Plants

'Mums as pot plants can be grown the year around or for any special Holiday or Season. If you are not familiar with this program, read the article on Lighting and Shading carefully and follow the selected program according to schedule, making certain to maintain the temperatures given. Plant 5 cuttings to a 6" pot in any good soil and peat mixture, keeping them properly fed and watered. Maintain a temperature of 60-65° at night. After color shows, plants should be finished at a cooler temperature to harden them off.

RECOMMENDED VARIETIES FOR POT PLANTS—

VARIETY	TREATMENT	RECOMMENDED FLOWERING PERIO
8 week WHITE Gardenia	Medium	March thru September
8 week YELLOW Blazing Gold	Medium	March thru September
9 week WHITE Wilson's White Queen's Lace Luna, (Cream) Alaska	Short Tall Short Tall	Year 'round Year 'round Year 'round April thru November
9 week YELLOW Yellow Lace	Tall	Year 'round
9 week PINK Blue Ribbon Queen of Pinks	Medium Medium	Year 'round September thru June
10 week WHITE Oregon Little America Illini Snowdrift Ind. White	Short Tall Tall Tall	September thru July September thru June March thru December Year 'round
10 week YELLOW Ind. Yellow Yellow Delaware	Tall Short	Year 'round Year 'round
10 week BRONZE Jetfire Ind. Bronze Delaware Copperhead	Tall Tall Short Tall	September thru December September thru May September thru May September thru December
10 week PINK Ind. Pink Portrait Portrait Humdinger	Tall Medium Tall Medium	September thru June July thru February March thru June March thru December
11 week YELLOW Bonnaffon Deluxe	Medium	Year 'round
11 week BRONZE Calvert's Gold Valentine	Medium Tall	October thru April October thru April
11 week PINK Calvert's Pink	Medium	November thru December

TALL, MEDIUM, AND SHORT TREATMENT PROGRAMS

Because of the difference in growth habit of the varieties used in the Pot Plant Program it has been found advisable to classify these into Tall, Medium and Short growing groups. These classifications are made and programs set up for each to allow for better control over their growing habits and should result in more uniform finished plants. In following this program first select desired blooming

date, variety to be flowered, and follow the procedure for the particular variety, e.g. Bonnaffon DeLuxe is listed under medium treatment, 11 week response. To flower this variety for April 1st, 1957, follow medium treatment, 11 week response for that date; or; plant Dec. 24, Pinch Jan. 14, Lights on Dec. 24 to Jan. 14, no shade required.
